

How to Online Viewing the Wifi Support Spy Camera?

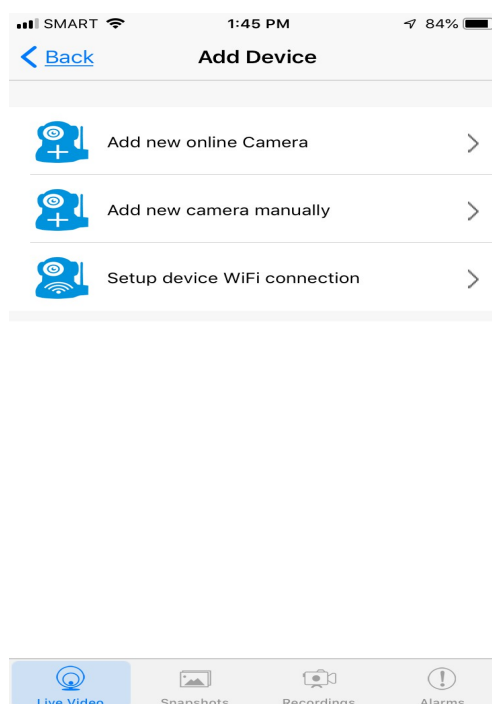

Procedure how to Online Viewing a Spy Camera

1st- Download the HDMiniCam/P2PLIVECAM Mobile apps for Android and iOS.

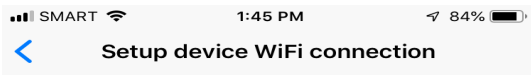

2nd-After download the Mobile apps, Turn on the Spy Camera and Open the HDMiniCam/P2PLIVECAM apps on your mobile.

3rd-Tap the Add Device ICON, and click Setup device Wifi Connection.

And follow the Step to Setup device Wifi Connection.

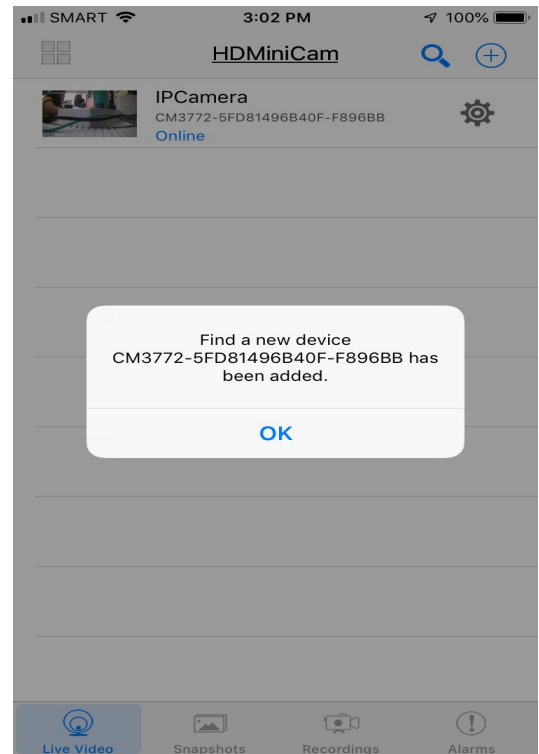

Step 1. Power on the camera, then go to "Settings" on your phone. Tap on "WiFi", then connect to the camera's WiFi network (the WiFi name same as camera's UID). as below.

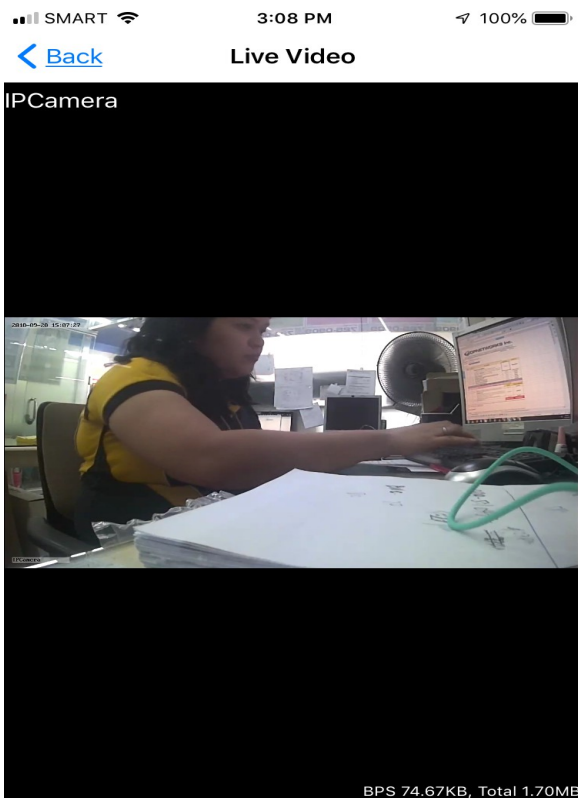

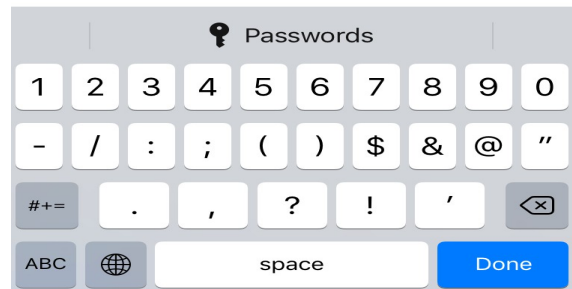

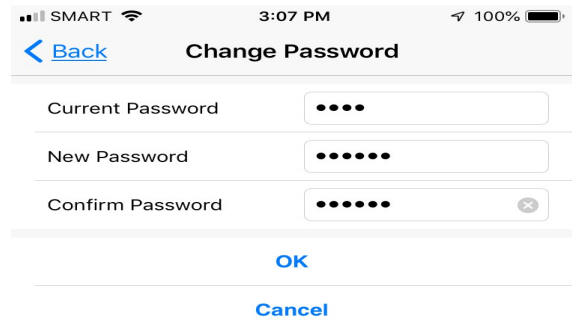

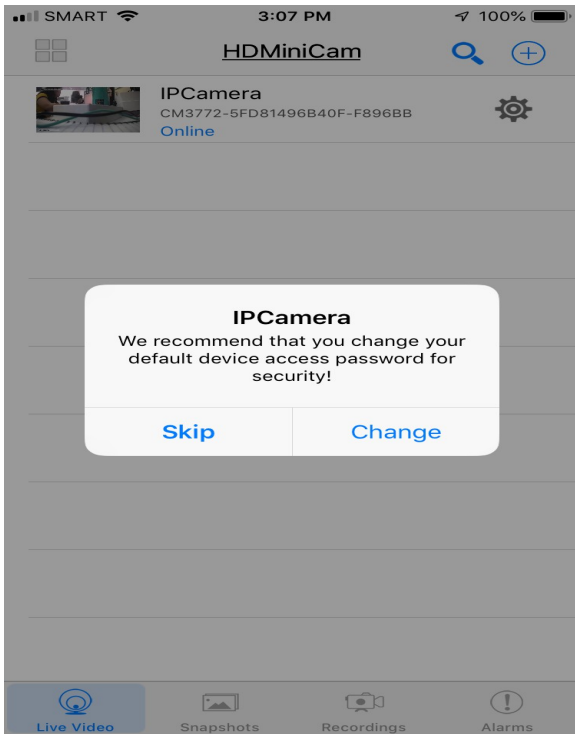

If you can not find the WiFi network same as camera UID, Please reset the camera and wait until the camera restarts, and then search for Wifi signal

4th-After you connect to Camera Wifi, go back to HDMiniCam Apps in your mobile, then automatically, your SPY Camera device will be added .

[Connect to Camera WiFi](#)

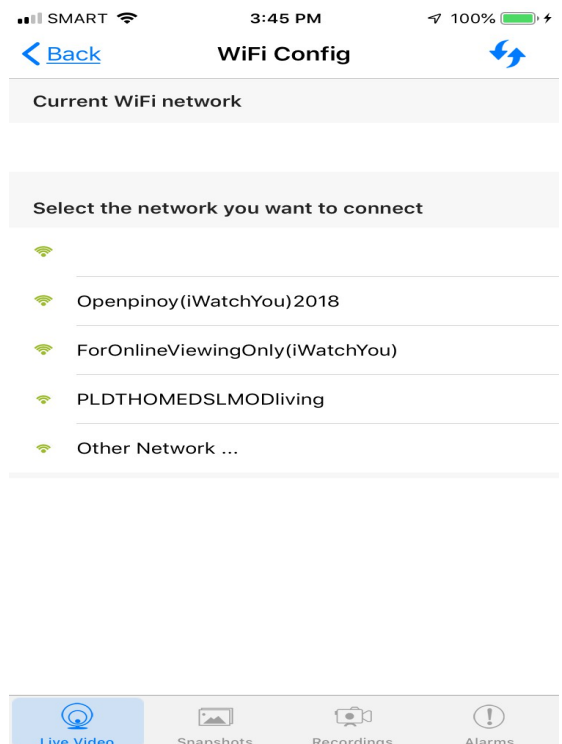

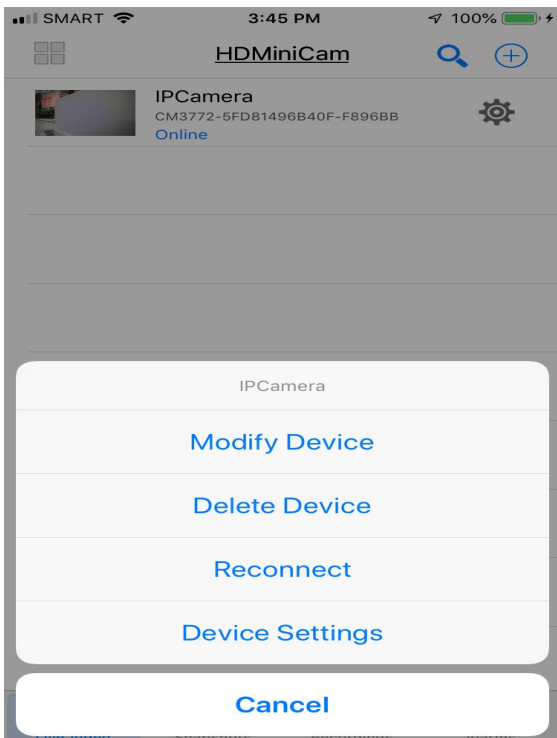

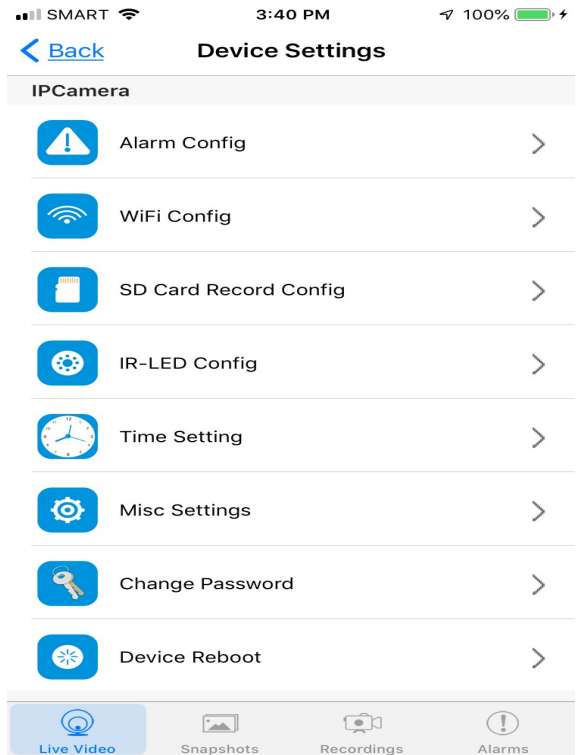

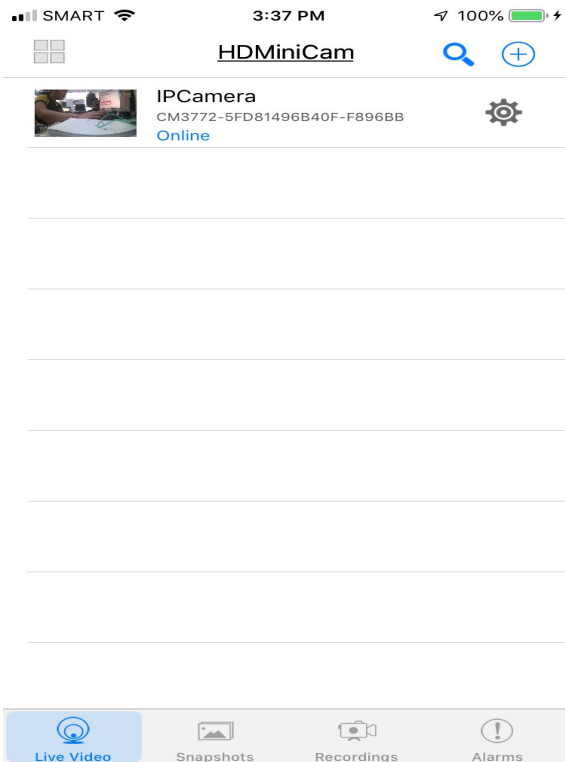

To access the Live Video of the camera, just tap the IPCamera Device, then automatically the IPCamera will suggest or recommend to change the default device access password for Security purpose!

5th- After Changed the Device password, you can now easily access the LIVE VIDEO of SPY Camera but only local network.

6th- To access the Live Video in Global Networks, go back to Device list, tap the Setting icon, and tap Device Settings, and tap WiFi Config, then Select the network you want to connect your IPCamera ., Much better use your Home WiFi so that the connection is stable.

After you connect your IP Spy Camera in your Home WiFi, you can easily access the Live Video of your IP camera anywhere.
